Homework: Beginner - Distance

Name: _____ Email: _____
Date: _____

Go to a park with a friend. You will need to find the widest open space you can. Have your friend stand on the opposite side. Hopefully they will be teeny tiny. Take a picture with their head in the top right power point according to the rule of thirds. Take 10 big steps towards your friend and take another picture, repeat making sure to keep their head or eye in the top right power point until you are so close you can only see their face or eye.

If you cant find someone to go to the park with you...pick an object in the distance and approach it in the same manner.

How does distance affect size and detail?
